## *Introduction*

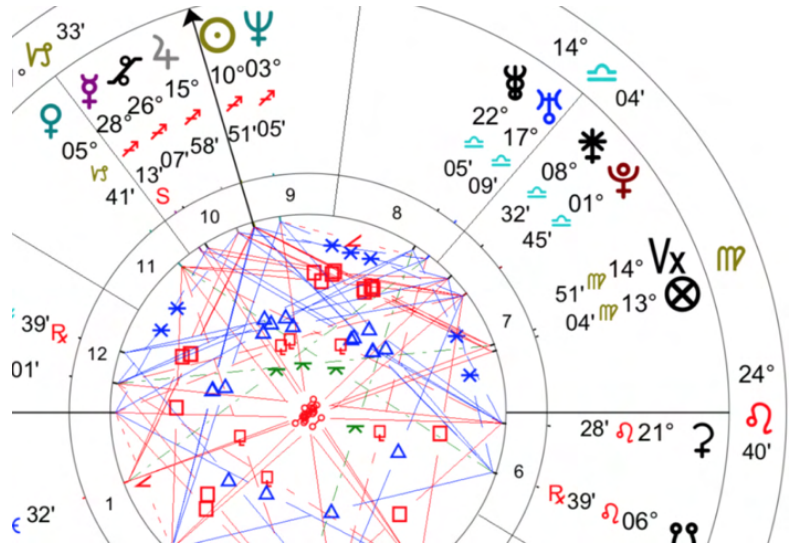

---

Welcome. In short order, you will be introduced to the two great secrets of Astrology. Astrologers do not share these secrets for a very simple reason. Once you know them, you probably won't need an astrologer. So why would a professional teach you the secrets that would make them obsolete? Good question. Astrology is big business. People pay hundreds and thousands of dollars for professionals to read their charts and offer advice. We have no issue with this as it is a valuable profession. But there is another way to the benefits of Astrology. And it does not have complicated birth charts. What?

You know that traditional astrology is based on your birth chart. The birth chart shows you the placement of each of the planets in various zodiac signs at the time of your birth. Each planet has its function, and you need to understand how to read each one and its relation to all the others. Plus, there are houses. These are divisions of the Zodiac that are somehow related to parts of human life. And you need to know where are the planets were in those houses when you were born. And you need to know what booze was ascending and a lot more.

And by the way, somehow, this is all based on the exact moment of your birth, which many of us don't know for sure. To make this almost impossible - all this changes by the minute your whole life because all those planets and the earth are moving around and around. No wonder most of us, except trained astrologers, just read the general horoscope of our sun sign and call it a day.

Trained traditional astrologers spend many years learning how to make and read these charts and the houses, trines, squares, ascendants, planets, etc., they contain. They study how all this makes us somehow unique. This can be quite a challenge to understand and use in daily life.

Now for some uses, it is okay. We all like knowing we are an Aries or Pisces or that our zodiac sign says we are smart or likable. No harm here. Or it might tell us; we like the other 600 million Aries, are comparable with one of the 600 million Taurus born. But there is an aspect of astrology that is much more accessible, understandable, and useful in daily life. It is Moon Astrology. And the very cool thing about Moon Astrology is that it works, and you can do it yourself.

To begin to understand a bit about Moon Astrology and reveal its two amazing secrets, we need a bit of background. The Moon is how we humans have counted the passage of time until very recently. We have looked to the Moon to measure and regulate our activities from procreation to planting since the beginning of time. The Native Americans named the moons for the weather or other natural events that occurred during them. The wolf moon, the long snows moon, and other names were common. (If we did that today, we would probably make the one in February "The dreary grey moon" and then in April "the IRS moon.")

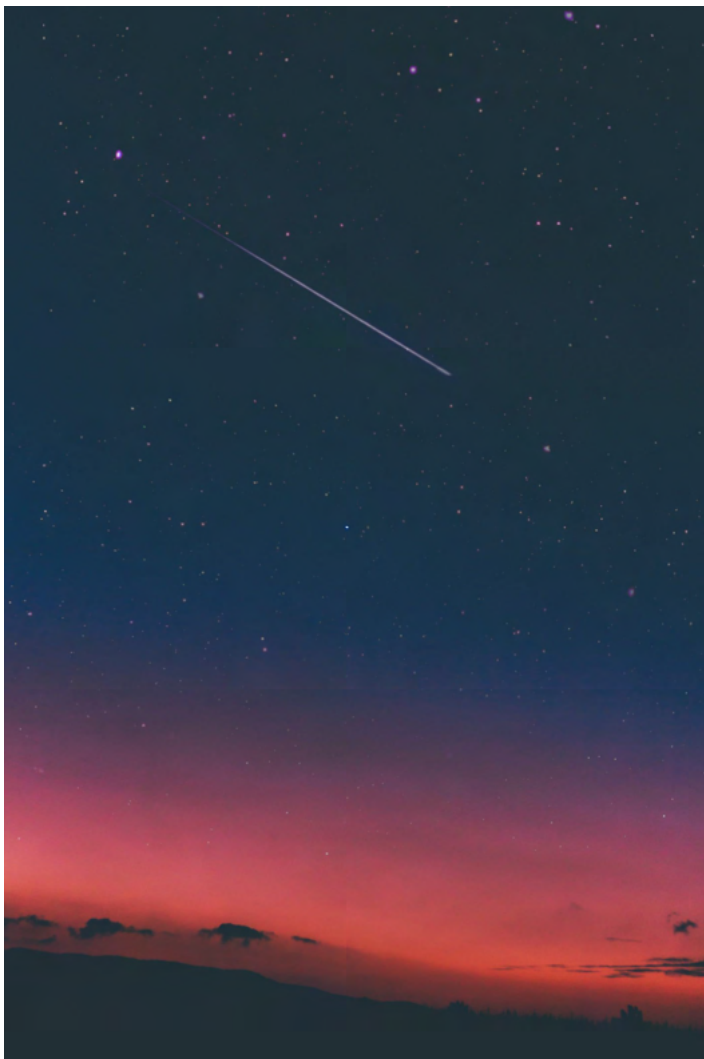

But the reverence for the Moon is much more widespread. In pre-Christian Europe, the Moon religions were the dominant ones. Halloween and Easter are actually holdovers from when the Catholic Church co-opted. These were times of ancient ceremonies and festivals based on the cycle of life measured by the Moon.

And the Moon's links to the cycles of life and procreation are well known. Its relationship with the cycles of human women, the timing of seed pods, and the courting behaviors of animals are well established. There is little to wonder here. The Moon was in the sky before the first trace of life was formed on earth. We were all created under the Moon. We are all moon children. And this is important for a simple reason.

# FIRST SECRET OF ASTROLOGY

**When it is in the sky, the Moon's influence totally overshadows and dwarfs all the other stars' and planets' astrological effects!**

You see, the Moon is so big and bright compared to all the other planets; it dwarfs their astrological influences when it is up.

The Moon is about 239,000 miles from earth. Let's compare that to some of the other planets used in Astrology. Let's take Saturn. Saturn's distance from the earth varies but averages about 1 billion miles. That is about 4 million times farther away from earth than the Moon. The result is that the moon's influence is millions of times more than Saturn's when the Moon is above the horizon. It is like a giant searchlight in your backyard compared to someone with a flashlight somewhere in China. It really does not matter where the guy with the flashlight is in China when the searchlight is on in your yard shining in your window. The light of a searchlight just outside your window would be overpowering when it was on. So too is the astrological effects of the Moon when it is visible to us in the sky. Its energy just dwarfs that of all the other planets.

So, for the most part, during days when only the Sun is up, the astrology you have been using is probably working okay. But when the Moon is in the sky with the Sun during the day (like around the New Moon each month) or in the sky by itself at night, the world changes drastically. Now the Moon's influence is simply overpowering.

So how do you use this secret? Easy. You just need to know a couple of things.

First, the Moon, in its monthly trip around the earth, transits the entire Zodiac. In just 28 days, it completes a circuit from the beginning of Aries to the end of Pisces. And the Moon has powerful effects on us as it transits the entire Zodiac each month, passing each day through the 28 Mansions of the Moon. The 28 Mansions of the Moon are the 28 parts of the Zodiac. If you divide the Zodiac into 12 parts, you get the Sun signs you know, like Aries, Taurus, Gemini, etc. If you divide the Zodiac into 28 parts, you get the 28 Mansions of the Moon, such as the Mansion of the Mountain or the Mansion of the Storm. The Moon visits one of them approximately every day. And knowing which one it is in turns out to be about all you need to know to use astrology every day. (Now, if you search the Internet to learn more about the Mansions of the Moon, you will find most sites still use the 5000-year-old Arabic names. They are not helpful anymore. We use the modern English names based on the Elemental energy of that part of the Zodiac, which gives is much more useful information for modern life.)

# Daily Crystal Horoscope

So to be clear, the Moon, in its approximately 28-day orbit of the earth, passes through the entire Zodiac. And in moon astrology, that familiar pattern of stars is divided into 28 parts called Mansions. So the Moon's effect in that part of the Zodiac each day affects our lives and spirits when it is above the horizons. In addition, the energy from the Moon's time in a Mansion affects your subconscious. So if you can understand how the Moon's effects from a Mansion are being combined with your desires and needs in your subconscious mind, you will have a daily horoscope that is uniquely yours. In fact, you would have a timely horoscope focused on your current needs and helping you get the things you want in life.

If this is of any interest, we have a beautiful [Crystal Daily Horoscope Kit](#) that lets you track the Moon in the Zodiac and understand its influence on your life and spirit each day. We also teach a course in Moon Astrology, and we offer a Moon Astrology Community in the Crystal Inner Circle.

Okay, that is the first secret. And it makes sense. We all learned in school that something's effect decreases with distance. In fact, some of us remember that things like light decrease with the square of the distance. So it makes scientific sense that the Moon being so close and bright would dwarf the effects of the planets that are a billion miles away. So if we track the effects of the Moon in its 28-day journey around the Zodiac, we will be much more in tune with the Universal energy. Got it.

## **With that, what is the second secret?**

Well, remember traditional astrology is based on your birth chart. The locations of the planets when you entered the world sets the basis of your life. So you are stuck with it. The problem here is that you grow, develop, evolve, learn, adapt, progress, and change constantly... Guess what, so does the universe. So how do you deal with that.... Moon Astrology answers....

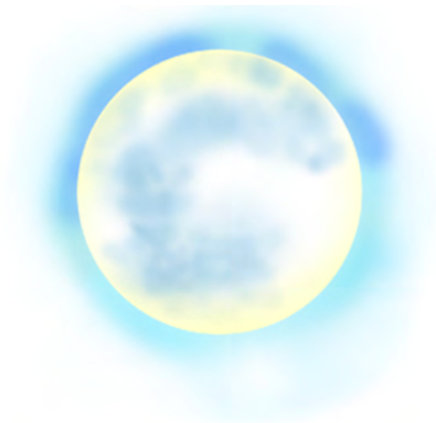

# SECOND SECRET OF ASTROLOGY

**You have a new Birthday Mansion of the Moon each year that sets the tone and energy of the coming year. As you grow and change, you "reset" your astrological energy with the universe each year.**

Remember we mentioned that the Moon transits the entire Zodiac in its 28-day orbit. But since our calendar of days and months and years don't line up with that cycle, the Moon will not be in the same part of the sky each year on a given day, say January 13th, so on your birthday next year, the Moon will be in a different part of the Zodiac than it was on your birthday this year. Knowing which part it is in is what Mansion of the Moon it was transiting sets the energy for your year.

So in traditional astrology, you are a victim of your birth. In Moon Astrology, you get a new "do-over" every year. Now you don't get to pick the Mansion of the Moon; that is what it is each year. But understanding what your Birthday Mansion of the Moon is and what it means is huge. It tells you what activities and energy will be advantageous for you that year. It can be quite illuminating.

## A Guide to Crystal Moon Astrology

How do you know what Mansion of the Moon will visit on your next birthday and what that means? Easy. Remember that Daily Crystal Horoscope Kit? It has a calendar in it that shows the Mansions for every day. So you can just look at the calendar in the kit. And if you want to know more, we can help. [There is a free guide on Crystal Vaults for you. It is here.](#) And there are links on that free guide to 28 additional guides - one for each of the mansions. All free.

So, consider the benefits of Moon Astrology. You can learn more [in our free guide](#). Then, you can try it for yourself with our [Daily Moon Horoscope Kit](#).
